苹果属一新种

邓 家 祺 (金县农业技术推广中心,辽宁)

洪 建 元 (沈阳农学院•沈阳)

A NEW SPECIES OF THE GENUS MALUS MILL.

DENG JIA-QI

(Popularization Centre for Agricultural Technique of Jinxian County, Liaoning)

HONG JIAN-YUAN

(Agricultural College of Shenyang, Shenyang)

Key words Malus; M. jinxianensis 关键词 苹果属;金县山荆子

金县山荆子 山丁子(土名) 新种 图 1

Malus jinxianensis J. Q. Deng et T. Y. Hong, sp. nov.

Species M. baccatae (L.) Borkh. similis, sed foliis variabilibus, ellipticis ad ovatis, raro suborbicularibus, margine undulatis, minute arguteque serrulatis, interdum serraturis argutis recurvisque vel uniformibus, sepalis ovatis, apice caudatis, rarius longe acuminatis, stylis vulgo (3—) 4, basi albo-puberulis, rarius glabris, fructibus obovoideis, cicatricibus calycium deciduorum majoribus differt.

Arbor; rami vetusti nigro-brunnei; ramuli graciles, leviter tortuosi, teretes, subglabri; gemmae ovoideae, apice obtusae, perulis margine leviter pubescentibus, rubro-brunneis ornatae. Folia elliptica ad ovata, raro suborbicularia, 4—8 cm longa, 2—5 cm lata, apice acuminata, rarius caudato-acuminata, basi late cuneata vel subrotundata, margine undulata, minute arguteque serrulata, serraturis interdum recurvis vel uniformibus, juventute utrinque ad nervos pubescentia, mox glabrescentia; petioli 1—1.5 cm longi, juventute pubescentes. mox glabrescentes, demum glabri; stipulae lanceolatae, c. 1 cm longae, minute serratae, caducae. Inflorescentia umbellata in apice ramuli orta, 3—5cm in diametro, 3—6-flora; pedicelli glaciles, 2.0—3.3cm longi, glabri; bracteae lineari-lanceolatae, supra leviter pilosae, margine glanduloso-serratae; flores diam. 1—2cm; calyx extus glaber; sepala ovata, apice caudata, rarius longe acuminata, integra, 3—4 mm longa, intus tomentosa, calycis tubo longiora; petala ovata, 1—1.5cm longa, apice obtusa, basi breviter unguiculata, pallide rosea; stamina 20—30, inaequalia, petalis circum duplo breviora; styli vulgo (3—)4, basi

本文承向德浚教授,陆玲娣和谷粹芝同志审阅,关玉田、芮光绳、于英群和张栋民同志参加筛选,谨此致谢。

leviter coaliti et albo-puberuli, rarius glabri, staminibus paullo breviores. Fructus obovoideus, circum 1 cm in diametro, purpureus, calycis cicatrice majore notatus; pedicelli fructiferi 3-3.5 cm longi.

Liaoning (辽宁): Jin Xian (金县), 1V 1984. J. Q. Deng (邓家祺) 37 (Holotypus, PE)。

乔木。老枝暗褐色,小枝细弱,圆柱形,近无毛。冬芽卵形,先端钝,鳞片边缘微具短柔

毛,红褐色。叶片椭圆形至卵形,稀近圆形,长 4-8cm, 宽 2-5cm, 先端渐尖, 稀尾状渐尖, 基 部宽楔形或近圆形,边缘具细锐锯齿,有时具下 弯或钩状尖锐锯齿,幼时两面沿叶脉有短柔毛, 不久脱落无毛,叶柄长1-1.5cm,幼时有短柔 毛,逐渐脱落无毛;托叶披针形,长约 lcm,有细 锯齿,多数早落。伞形花序集生在小枝顶端,直 径 3-5cm, 具花 3-6 朵; 花梗细,长 2.0-3.3 cm; 无毛; 苞片线状披针形, 上面有疏柔毛, 边 缘具腺齿;花直径1-2mm;花萼外面无毛;萼片 卵形,先端尾尖,稀长渐尖,全缘,长3-4mm,内 面被绒毛,长于萼筒;花瓣卵形,长1-1.5cm,先 端圆钝,基部有短爪,淡粉红色;雄蕊20-30枚, 长短不齐,长约花瓣之半;花柱通常(3-)4,基 部稍联合并具白色微柔毛,稀无毛,稍短于雄 蕊。果实倒卵球形,直径约1cm,紫红色,萼痕 较大; 果柄长 3-3.5cm。花期 5 月上旬, 果期 10 月上旬。

图 1 金县山荆子 Malus jinxian-ensis J. Q. Deng et J. Y. Hong

本种近似山荆子 Malus Baccata (L.) Bor- Q. Deng et J. Y. Hong kh., 区别在于本种叶片形状变异较大, 椭圆形至卵形, 稀近圆形, 边缘具细锐锯齿, 有时具下弯或钩状尖锐锯齿; 萼片卵形, 先端尾尖, 稀长渐尖; 花柱通常 (3—)4, 基部具白色微柔毛, 稀无毛; 果实倒卵球形, 萼痕较大。
